1.

Install Pd-extended in your O.S. >>

<https://puredata.info/downloads/pd-extended>

OR

<https://sourceforge.net/projects/pure-data/files/pd-extended/0.43.4/>

OR

https://sourceforge.net/projects/pure-data/?source=typ_redirect

2.

Once Pd-extended is installed download those packages depending the version :

<http://eixams.cc/code/PrOHpolium.v1.Glitch.zip>

3.

Search the file

[^0^prOHpolium.v1.pd](#)

which is contained within PrOHpolium.Glitch Directory.

4.

Open ***^0^prOHpolium.v1.pd*** with pd-extended (right button open with Pd-extended)

or

Alternative way

//////////

By terminal:

Open a shell and type 'cd' until PrOHPollium Directory depending where you saved it.

For example

cd /home/user/Desktop/PrOHpolium.v1.Glitch/PrOHpolium.Glitch/

(in case you downloaded the packaged in Desktop)

type

pd-extended ^0^prOHpolium.v1.pd

and the application will run it generatively.

notes:

Prohpolium in its both versions is fully supported in Pd-extended. This means that in other versions can generate errors. In pd-l2ork and pd vanilla, prOHpolium is not fully working with all its features.

PrOHPollium is a generative Instrument which drives Eixams Installation
